

Meta Lead CRM

Project uses and features

What it is

A lead management CRM for leads that come from Meta (Facebook and Instagram) ads. Leads from ad forms land in the CRM automatically, appear on the team's screens in real time, and are worked by staff through calls, notes and follow-ups until they convert or close.

Who uses it and why

- **Admissions / sales team:** call new leads quickly, log every conversation, and never miss a callback.
- **Team leads / admins:** assign leads to staff, watch progress and manage the team.
- **Marketing:** see which campaigns, ad sets and ads bring leads that actually convert.
- **Management:** get clear lead and conversion numbers and export them as reports.

How a lead flows

Step	What happens
1. Ad form	A person fills a Facebook or Instagram lead form on one of the ads.
2. Webhook	Meta sends the lead to the CRM's webhook endpoint (/api/meta/webhook).
3. Saved	Name, phone, email, course, location, all form answers, and the campaign, ad set and ad it came from are stored.
4. Live alert	Everyone with the CRM open sees the new lead instantly, with a sound alert.
5. Worked	Staff call, add notes, update status and schedule follow-ups until the lead is closed.

Features by page

Page	Features
Login	Secure sign-in for admin and staff accounts.
Dashboard	Lead counts and key stats at a glance.
Leads	Full lead list with search and filters. Open a lead to change status, assign to staff, add call notes, schedule a follow-up, and view the original form answers.
Follow-ups	Scheduled and due callbacks in one place.
Campaigns	Leads grouped by Meta campaign, ad set and ad, to compare ad performance.
Reports	Performance reporting with export to file.
Staff	Admins add and edit staff, and enable or disable accounts.
Settings	Meta connection and general setup.

Lead statuses

New → Contacted → Follow-up → Interested → Converted, or Not Interested / Closed.

Lead sources

Meta Lead Form, Facebook Instant Form, Instagram Instant Form, Meta Ad, and Manual Entry.

User roles

Role	Access
Admin	Sees everything, manages staff accounts, assigns leads.
Staff	Works the leads assigned to them: calls, notes, statuses, follow-ups.

Other ways to add leads

- **Manual entry:** add a walk-in or phone enquiry by hand.
- **Batch import:** add many leads at once.
- **Simulate Meta lead:** create a test lead without running real ads.

Key benefits

- Faster response: leads appear the moment they submit the form.
- No lost leads: every lead, note and follow-up is stored in one place.
- Clear ownership: each lead is assigned to a staff member.
- Better ad spend: see which campaigns and ads produce real conversions.
- Easy reporting: export data for management reviews.

Technology

Part	Built with
Frontend	React (Vite), runs on port 3000
Backend	Node.js + Express, runs on port 5005
Database	MongoDB (falls back to a temporary in-memory database if MongoDB is unreachable)
Real-time	Socket.io for live lead alerts
Security	JWT login tokens, hashed passwords (bcrypt), admin-only staff management
Integration	Meta Lead Ads webhook

Running it

- Backend: `cd server && npm run dev` (run `npm run seed` first for sample data).
- Frontend: `cd client && npm run dev`, then open `http://localhost:3000`.
- To receive real Meta leads, the webhook must be on a public URL and registered in the Meta app.

Note: the seed script creates demo logins with default passwords. Change or remove them before going live.
